Hello Sravanthi,

Find the task details below

1. Multiple Components

Task: Build Header, Content, and Footer components. Render inside App.

Example Input: Render `<App />`; output shows all three component sections.

2. Pass Props to Child

Task: Pass a title prop from App to Header.

Example Input: `<Header title="Welcome to My App" />`

Expected Output: Header displays "Welcome to My App".

3. State Hook (Counter)

Task: Add a counter state with increment button.

Example Input: Click "Increment" button.

Expected Output: Counter value increases on each click.

4. State Hook with Arrays

Task: Todo list with state as array; add new items.

Example Input: Enter "Buy milk", click "Add".

Expected Output: List now shows "Buy milk".

5. Update State Using Callback

Task: Update state based on previous value (toggle dark/light mode).

Example Input: Click "Toggle Theme".

Expected Output: Theme switches with each click, always reliable.

6. Update Browser Title with Effect

Task: Use `useEffect` to change page title with counter state.

Example Input: Increment counter, see browser tab title change.

Expected Output: Page title updates: "Counter: 3".

7. Multiple Effects for Separate Concerns

Task: One `useEffect` fetches data; another updates title.

Example Input: Both effects run for their respective triggers.

Expected Output: Data fetched on mount, title updates on state.

8. Store Value in localStorage

Task: Save username to localStorage on state change.

Example Input: User types new username; code updates localStorage.

Expected Output: localStorage contains latest username.

9. Get Value from localStorage

Task: Initialize state from localStorage when app loads.

Example Input: Previous session's username appears automatically.

9. Mini Notes App with Persistence

Task: Create notes app; notes array persists in localStorage.

Example Input: Add note "Study React"; refresh page.

Expected Output: "Study React" remains after reload.

10. User Status Conditional Rendering

Task: Show "Welcome, User!" if logged in; else show login button.

Example Input: User state **isLoggedIn: true** renders welcome message.

11. Toggle Visibility

Task: Toggle "Show Details" button; show/hide content.

Example Input: Click button to hide or display details.

Expected Output: Details appear/disappear on toggle.

12. Conditional List Rendering

Task: Display message "No items" when array is empty; show items otherwise.

Example Input: Empty array → "No items"; add "Item A" → shows "Item A".
